

RISK DISCLOSURES

V1.12.2025

TTP Ltd

CT House, Office No.9A,
Providence, Mahe, Seychelles

RISK DISCLOSURE STATEMENT

This Risk Disclosure Statement (“Risk Disclosure”) is issued by TTP Ltd, a company incorporated under the laws of Seychelles and regulated by the Seychelles Financial Services Authority (FSA) with licence number SD223 (“the Company”).

This document describes the general risks associated with trading Contracts for Difference (“CFDs”) and other leveraged financial instruments offered by the Company. It does not describe all risks or all aspects of such transactions. CFDs are complex financial instruments and involve a high risk of loss. They are not suitable for all clients.

No Investment Advice and Client Responsibility

The Company does not provide investment advice, portfolio management services, or personal recommendations. Any information, research, market commentary, or educational material provided by the Company is of a general nature only and is not intended to take into account the Client’s personal circumstances, financial situation, or investment objectives.

The Client remains solely responsible for determining whether trading with the Company is appropriate and for all decisions made in relation to trading activity.

Nature of CFDs and Leverage Risk

CFDs are traded on margin and involve the use of leverage. Leverage allows the Client to open positions larger than the amount of funds deposited in the trading account. While leverage may amplify potential profits, it also significantly increases exposure to losses.

Even small adverse market movements may have a disproportionate effect on the Client’s account and may result in losses equal to or greater than the amount of funds deposited.

Risk of Capital Loss

The Client acknowledges and accepts that the Company does not guarantee the preservation of capital. Funds deposited into the Client’s account may be lost in whole or in part as a result of trading activity. Under certain market conditions, losses may exceed the initial deposit.

The Client should not trade unless they are prepared to bear the full risk of losing all invested funds.

Market and Volatility Risk

The prices of financial instruments may fluctuate rapidly and unpredictably due to changes in market conditions, liquidity, or economic, political, or financial events. Such movements may occur within a short period of time and may result in significant losses.

Any reference to past performance, historical data, or simulated results does not constitute a reliable indicator of future performance.

Margin Requirements and Forced Liquidation

Trading on margin requires the Client to maintain sufficient equity in the trading account to support open positions. If the Client's account equity falls below the required margin level, the Company may request additional funds at short notice or may close some or all open positions without prior notice.

Any losses or deficits arising from the liquidation of positions remain the sole responsibility of the Client.

Liquidity Risk

Certain financial instruments may become illiquid under specific market conditions. In such circumstances, the Client may not be able to close positions at the desired time or price. In addition, pricing information may be limited or unavailable, which may increase the risk of loss.

Execution Risk, Slippage, and Market Gaps

Under certain market conditions, including periods of high volatility, market openings or closings, weekends, or following significant economic or political announcements, orders may be executed at prices different from those requested. In some cases, orders may not be executed at all.

Price gaps may occur, and protective orders, including stop-loss orders, are not guaranteed to limit losses to the intended amount.

Foreign Market and Currency Risk

Where financial instruments are denominated in a currency other than the Client's account currency, changes in exchange rates may adversely affect the value of the Client's positions, profits, or losses.

Trading on foreign markets may involve risks different from those applicable in the Client's country of residence. These risks may include increased volatility and differences in regulatory or market practices.

Technology and Operational Risk

Trading is conducted through electronic trading platforms and communication systems. The Client acknowledges that failures or disruptions may occur, including system delays, platform malfunctions, internet connectivity issues, or cybersecurity incidents.

Such events may prevent the Client from placing, modifying, or closing orders and may result in financial loss.

Taxation and Legal Risk

The Client is solely responsible for determining the tax and legal implications of trading activities. Changes in applicable laws, regulations, or the Client's personal circumstances may affect the tax treatment of trades.

The Company does not provide tax or legal advice and does not guarantee that no taxes, duties, or other charges will apply.

Costs and Charges

Before trading, the Client should ensure that they fully understand all applicable commissions, spreads, fees, financing costs, and other charges. Where charges are not expressed in monetary terms, the Client should seek clarification in order to understand their financial impact.

Speculative Nature of Trading

Trading CFDs is speculative and involves a high degree of risk. Significant losses may occur within a short period of time and may be equal to or exceed the total funds deposited in the Client's account.

Acknowledgement and Acceptance

By opening an account and/or trading with the Company, the Client confirms that they have read and understood this Risk Disclosure, that they understand the risks associated with CFD and leveraged trading, and that they accept full responsibility for all trading activity and outcomes. The Client further confirms that they have sufficient financial resources to bear potential losses.
